Introduction

Stellar Cam is an intelligent security lighting system. With your mobile phone you can control the light and the camera. The system features: real-time camera monitoring, real-time intercom, automatic video recording/saving suspicious events, alert push notifications to your mobile phone, alarm sounding, scheduling for switching on/off, infrared sensing etc.

Getting the app

- iOS users: Search the Stellar Cam App in the App Store and then install it.
- Android users: Search the Stellar Cam App in the Google Play store and then install it.

Installing the product

Fix the product and the camera to suitable positions. Then connect the product with the power supply.

Introducing the app

1. Registering your account

- Open the Stellar Cam App and click "SIGN UP". If you have an existing account, then click "LOG IN".

Email

Incorrect email address

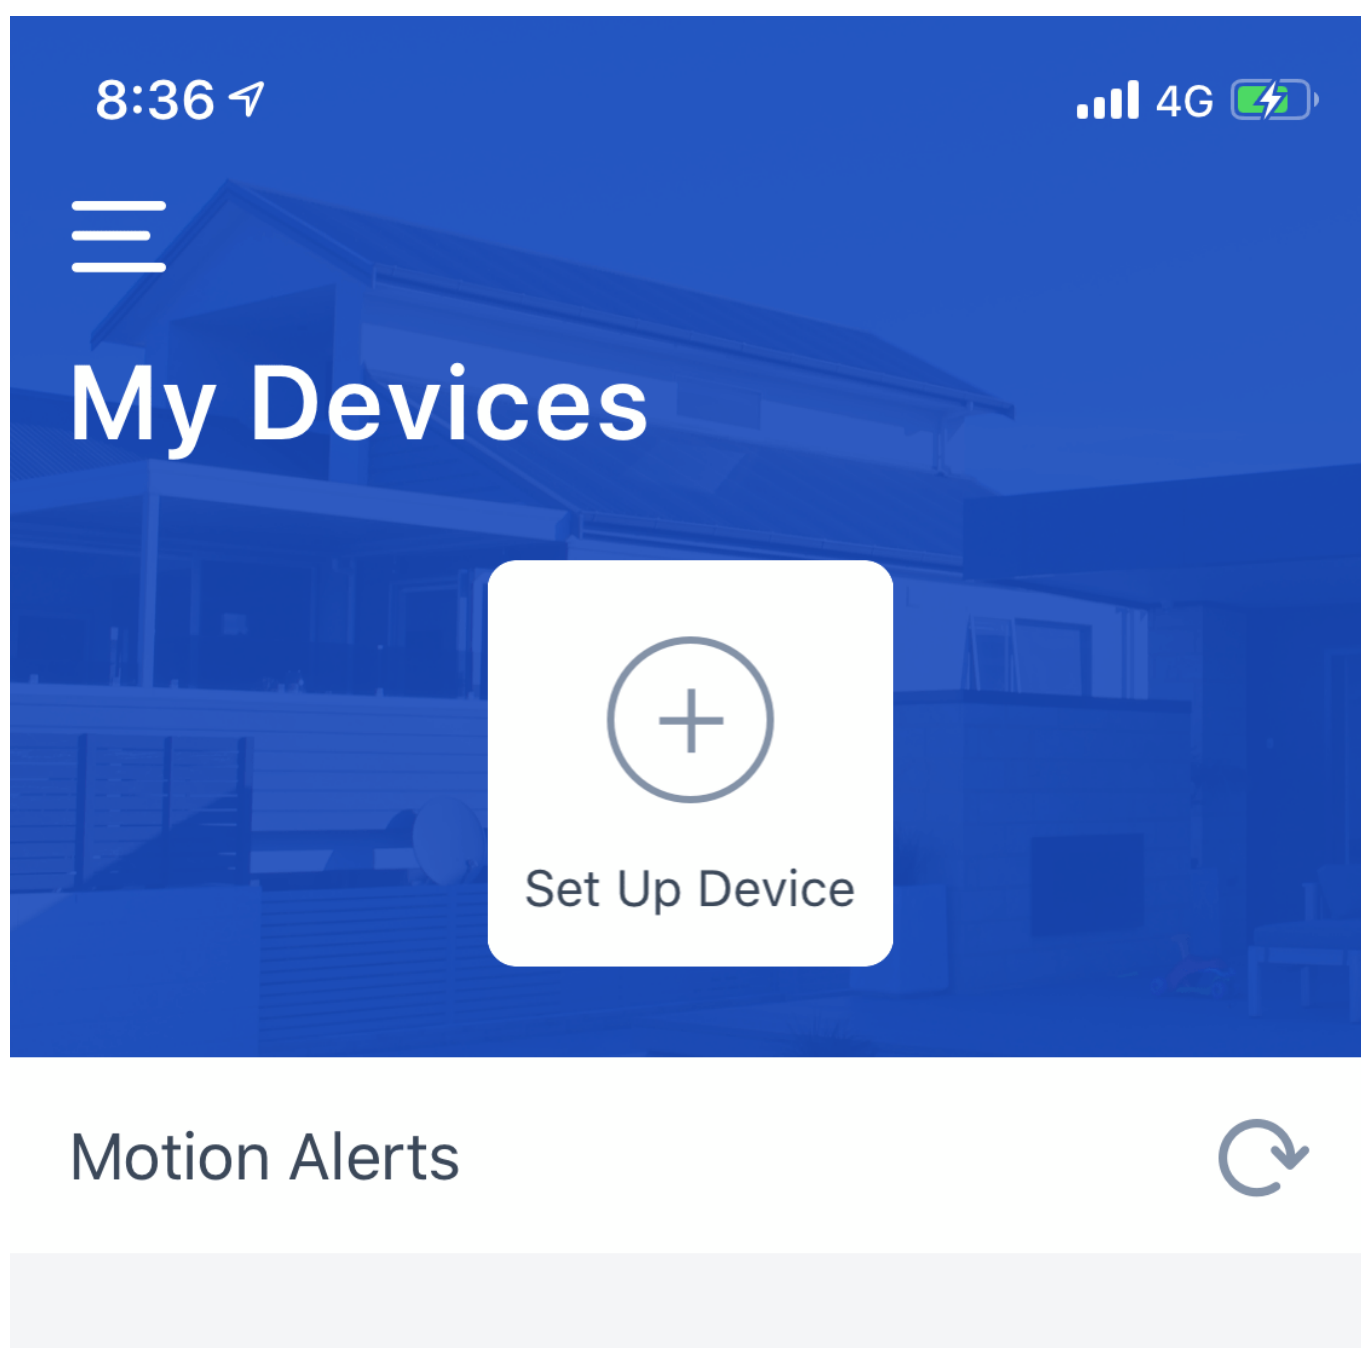

Password

Contains least 6 characters and most 32 characters

LOG IN

Forgot password?

- Type in your email address and password. Then click “SIGN UP”. This logs into the account automatically and switches to the App homepage after a successful registration.

when your devices capture
motion detection events, they will
show up here

2. Managing the account

- Click the pencil icon in the sidebar to access the account information for editing the display name, email address and password.

10. Light settings

1. Set the time period for automatic switching-on, usually set the night as the time period.
2. Set daytime mode. The light will switch on when infrared sensors detect motion if daytime mode is on.

3. Set the coverage range and area of the infrared sensing.
4. Set the light-up duration time of the light.

Customize the area that you want to
activate infrared motion detection

DISTANCE

After detected motion,
keep the lights on for
